Q&A

Azure AI Foundry

What's new in Azure AI Foundry Models?

Foundry Models

OpenAI

 Grok

 Mistral AI

 Meta

black forest labs.

 deepseek

<https://aka.ms/foundryprojects>

Generally Available

GPT-5

Unified reasoning + conversation in one family

Frontier-level code
generation & explanation

Developer controls
reasoning effort & verbosity

Free-form
function calling

Generally Available

GPT-5 APIs

GPT-5 — deeper, faster reasoning for analytics & decisions

GPT-5-chat — natural, multimodal, multi-turn, context-aware

GPT-5-mini — low-latency & cost for real-time copilots/summarization

GPT-5-nano — ultra-low latency for edge, mobile, embedded, only via API

Multimodal reasoning

Agentic
workflows

Available via Azure AI
[Model Router](#)

Enhanced coding and
logical reasoning

Generally Available

GPT-5-Codex

- Multimodal coding
- Interactive workflows in a model-guided loop
- Code review and defect detection
- Repository-aware automation
- Seamless experience across developers surfaces

Smarter Development

Faster Workflows

Accelerated Refactors
and Migrations

Safer Engineering

Public Preview

Model Router in Azure AI Foundry Models

Choose the right LLM for your diverse use cases

Optimized Routing

High Performance

Optimized Cost

In our tests comparing use of Model Router versus use of GPT-4.1 only, we saw up-to 60% cost savings with similar accuracy

What is a model router?

Challenge

Choosing the right LLM for a task is difficult. Users often stick to a single LLM for a given use case.

Opportunity

Smart routing **optimizes cost** while **maintaining quality**. Dynamically selecting the best model reduces expenses without degrading user experience.

Step 1

Users invoke the endpoint with Chat Completions or Responses API

Step 2

Router assesses the input parameters (like prompt, tool use) and dynamically routes to the optimal model

Step 3

The endpoint returns underlying model's response.

Demo – Model router

High Fidelity
1080p+

Generally Available

gpt-realtime

New, natural voices – two near clear and emotionally expressive voice options (Marin and Cedar).

Instruction Following – Enhanced adherence to tone, pacing, escalation triggers, accents, emotional shifts, and role-based behavior.

Function Calling – Reliable and accurate tool invocation with improved timing and argument accuracy. Supports patterns like `answer(question)`, `escalate_to_human()`, and `finish_session()`.

Audio Quality – improved alphanumeric reproduction, and strict modality control.

New, natural
expressive voices

20% cheaper than
gpt-4o-realtime-preview

Multimodal inputs

Conversational
behavior

New Release

Generally Available

gpt-audio

Demo – gpt-audio

What's new in Agents and APIs?

Generally Available

Introducing Voice Live API

Redefining agent communication
with advanced, real-time voice

Use the foundation
model of your choice

Unparalleled speech
recognition and
synthesis capabilities

Fully customizable
voices and avatars

aka.ms/voice-live

New | Preview

Browser Automation Tool

Build agents capable of performing
real-world browser tasks

Automate complex web
UIs, including form fills
and multi-step processes

Unparalleled speech
recognition and
synthesis capabilities

Powered by Azure
Playwright Workspaces

aka.ms/browserautomation

Demo – Browser Automation

Computer Use tool vs. Browser Automation

Capabilities	Browser Automation	Computer Use
Model support	Most models supported by Foundry Agent Service	Computer-use-preview model
Visualize what's happening	✗	✓
How it understands the screen	Parse the HTML or XML pages into DOM documents	Raw pixel data from screenshots
How it acts	A list of actions provided by the model	Virtual keyboard and mouse
Multi-step?	✓	✓
Interfaces	Browser	Computer and browser
Can I bring my own resource	BYO Playwright resource and store keys in connection	No resource required, we recommend using low-privilege virtual machines

Generally Available

Responses API

- Combines simplicity of Chat Completions API with tool use capabilities of Assistants API
- Seamless interaction with tools like CUA, code interpreter, function calling, and file search – all in a single API call
- Allows AI systems to retrieve data, process information, and take actions
- Enables AI systems to easily integrate with enterprise workflows

**Simplifies AI Agent
Development**

**Orchestrates
Multiple AI Tools**

**Enhances Scalability for
Enterprise Use Cases**

**Offers Flexibility with
Azure AI Agent Service**

Azure OpenAI API comparison (2 Oct '25)

Capabilities	Chat Completions API (Azure OpenAI)	Assistants API (Azure OpenAI)	Azure AI Foundry Agent Service	Responses API (Azure OpenAI)
Text generation	✓	✓	✓	✓
Audio	✓	✗	✓	Not yet available
Vision	✓	✓	✓	✓
Structured Outputs	✓	✓	✓	✓
Function calling	✓	✓	✓	✓
Web search	✗	✗	✓	Not yet available
File search	✗	✓	✓	✓
Computer use (CUA)	✗	✗	✓	✓
Browser use	✗	✗	✓	via CUA or MCP
MCP tool	✗	✗	✓	✓
Code interpreter	✗	✓	✓	✓
Reasoning models	✓	✓	✓	✓
Entra ID support	✓	✓	✓	✓
